

XC2 Software, LLC

Web and Remote Backflow Test Entry Options

Rev. 2016-12-17

Online – Web Based Options:

1. (BFP-WEB-TEST) - Web Based Backflow Test Results Entry – Hosted by Your Organization

Web Server Option hosted by your organization
Provides ability for authorized testing contractors to enter test reports online
All information is fully validated prior to acceptance
Pricing is a one-time cost (optional annual maintenance/support fees apply)

2. (XC2LIVE) - XC2Live Options – Hosted by XC2 Software LLC

This option provides the web server being hosted by XC2 Software.

All Backflow Test Reports will then be synchronized with your XC2 system on a scheduled, regular basis (e.g daily)

Cost is on a per test basis or annual contract.
Payment can be made by the backflow testing contractor or water purveyor.
Other options include the ability for XC2Live Staff to send annual test due notices.

File (Spreadsheet) Submitted by Testing Contractor:

3. (BFP-XTST) - Backflow Test Report Entry From External System

Provides ability to import test results from some other system
Requires specifically configured “flat” file with test results
Backflow Serial Number must be exactly the same in both systems
Tester Certification Number must be exactly the same in both systems
Import is initiated by a user of XC2.
Pricing is a one-time cost (based upon # of backflow records in your system)

Laptop in Field (Not Connected to Internet) – Synchronization Option

4. (XC2-SYNC) - Data Synchronization Option

This option requires the backflow tester to have a copy of XC2, that is specifically tied to your installation of XC2. The tester copy becomes the “Remote”. Your system is the “Master”
After test results are entered into the remote copy, these results can then be synchronized with the master system, when the Remote is connected to your network.

This is different than the online entry option above. Testers cannot enter information directly into the web version. It must be done in the Remote copy of XC2.

Updated and new information added to the Master system will be synchronized with the Remote System
Pricing is a one-time cost (based upon # of backflow records in your system)
